

# REDFLEX slimline<sup>®</sup>

## Ultra-Compact Camera System

**REDFLEX** slimline is an ultra-compact modular camera system that provides red light and/or speed violation monitoring and is used in conjunction with **REDFLEX** red<sup>®</sup> and **REDFLEX** speed<sup>®</sup> photo enforcement systems. Its small footprint makes it easy to mount to existing infrastructure.

Minimalism is the guiding design principle for the Slimline. While the smaller design in no way limits the functionality of the cameras, the pared-down aesthetic makes the system less conspicuous and more aesthetically pleasing on the streetscape.

Redflex Traffic Systems, Inc. is the industry leader in vehicle monitoring and enforcement services for government, police, and traffic departments across the United States. Our photo enforcement systems feature multiple integrated and synchronized high-resolution digital cameras to provide maximum flexibility for your unique needs.

# REDFLEX<sup>®</sup>slimline<sup>®</sup>

- Ultra-compact system footprint
- Is modular and flexible, mountable to existing poles where available
- Provides both REDFLEXred<sup>®</sup> and REDFLEXspeed<sup>®</sup> types of enforcement
- Can monitor up to six lanes of traffic simultaneously
- Intelligent traffic-phase interface allows for monitoring of multiple traffic phases, to suit all protected-turn lanes
- Monitors "straight," "left," "right turn" lanes as well as "no right turn on red" and "stop and go on red" traffic with full scheduling capabilities
- Provides remote system access for adjustments, maintenance, and transfer of incident data and statistics
- Utilizes all broadband methods of communication, including cable, DSL, ISDN, wireless broadband (EVDO), point-to-point, and fiber networks
- Cisco VPN hardware, managed by trained staff to ensure high security
- Secure onsite storage and continuous operation during communication outages
- A variety of vehicle detection systems available, including inductive loop, piezo, LIDAR, infrared, and video loop technologies
- CA vehicle code-compliant, ultra-fast visible strobe for full-color imaging. IR capabilities also available
- SMARTcam<sup>™</sup> software, industry-leading functionality, stability and flexibility. Provides multiple auxiliary camera capabilities to gain multiple fields of view (rear, front, multi-front photography)

- SMARTscene<sup>™</sup> subsystem for full-motion video provides situational awareness before and after incident. Patent-pending combination of high-resolution digital stills with full-motion video produces irrefutable evidence
- SMARTscene Live!<sup>™</sup> provides live streaming video to browsers, using high-performance compression algorithms and multiple simultaneous camera views. Also provides video recording capabilities
- Dynamic Pixel Utilization - more pixels are used in areas where they are more effective through the use of multiple cameras and multiple fields of view
- Health monitoring system ensures proactive maintenance to resolve potential field operation issues
- Multiple digital still camera options are available to suit multiple applications, including 2M, 6M, 10M, 11M and 12M pixels with wide dynamic range, fully automatic iris/aperture, gain and light-metered override functions
- Traffic data packages provide all the types of vehicle count statistics that can be obtained online

## Data Storage, Security, Effectiveness

All systems are username and password protected, and equipment features tamper-proof locks. Incident data is digitally signed, and information and remote connectivity are encrypted. Clear digital images and motion video show the status of the traffic signal and the location of the violating vehicle inside the intersection before and after the incident. The SMARTops<sup>™</sup> back-office data processing center provides turnkey solutions for data, violation, court evidence, and violation notice processing. Wireless or hardwired Internet capabilities are provided.
