

REDFLEX[®]stop

Stop Sign Violation Monitoring System

REDFLEXstop provides an industry-leading stop sign violation monitoring system. It utilizes proven **REDFLEX**red[®] and/or **REDFLEX**slimline[®] equipment, both of which provide outstanding situational awareness, with applications to manage the most challenging detection situations.

REDFLEXstop provides the high quality of data that consistently proves legible in judicial systems across the United States.

Redflex Traffic Systems, Inc. is the industry leader in vehicle monitoring and enforcement services for government, police, and traffic departments across the United States. Our photo enforcement systems feature multiple integrated and synchronized high-resolution digital cameras to provide maximum flexibility for your unique needs.

REDFLEX^{stop}

- Small footprint allows for installations with aesthetically pleasing ground-level enclosures tailored to site-specific environments
- Offers remote location capabilities, along with optional solar power and wireless broadband access
- Intelligent stop sign interface allows for monitoring of multiple traffic phases, to suit all protected-turn lanes
- Monitors "straight," "left," "right turn" lanes as well as "no right turn on red" and "stop and go on red" traffic with full scheduling capabilities
- Provides remote system access for adjustments, maintenance, and transfer of incident data and statistics
- Utilizes all broadband methods of communication, including cable, DSL, ISDN, wireless broadband (EVDO), point-to-point, and fiber networks
- Cisco VPN hardware, managed by trained staff to ensure high security
- A variety of vehicle detection systems available, including inductive loop, piezo, infrared, and video loop technologies
- CA vehicle code-compliant, ultra-fast visible strobe for full-color imaging. IR capabilities also available for low-light, non-intrusive applications
- SMARTcam™ software, industry-leading functionality, stability and flexibility. Provides multiple auxiliary camera capabilities to gain multiple fields of view (rear, front, multi-front photography)

- SMARTscene™ subsystem for full-motion video provides situational awareness before and after incident. Patent-pending combination of high-resolution digital stills with full-motion video produces irrefutable evidence
- SMARTscene Live!™ provides live streaming video to browsers, using high-performance compression algorithms and multiple simultaneous camera views. Also provides video recording capabilities
- Secure onsite storage and continuous operation during communication outages
- Dynamic Pixel Utilization - more pixels are used in areas where they are more effective through the use of multiple cameras and multiple fields of view
- Health monitoring system ensures proactive maintenance to resolve potential field operation issues
- Multiple digital still camera options are available to suit multiple applications, including 2M, 6M, 10M, 11M and 12M pixels with wide dynamic range, fully automatic iris/aperture, gain and light-metered override functions
- Traffic data packages provide all the types of vehicle count statistics that can be obtained online

Data Storage, Security, Effectiveness

All systems are username and password protected, and equipment features tamper-proof locks. Incident data is digitally signed, and information and remote connectivity are encrypted. Clear digital images and motion video show the status of the traffic signal and the location of the violating vehicle inside the intersection before and after the incident. The SMARTops™ back-office data processing center provides turnkey solutions for data, violation, court evidence, and violation notice processing. Wireless or hardwired Internet capabilities are provided.
